

Tsunami[®] SoundCar[™]

Don't miss out on half the fun! Only SoundTraxx brings you a DCC decoder that replicates sounds for the rest of your train.

The Tsunami SoundCar Digital Sound Decoder produces clacks, screeches, squeals, buzzes, whooshes and other rolling stock clatter. It also includes a selection of adjustable horns, bells and whistles for cab cars and cabooses. For even more realism, the decoder has four Hyperlight[™] equipped outputs for interior and exterior lights.

These universal-style decoders are easy to install in N - G scales and work with 8-ohm speakers. For the optimal experience, use a SoundCar decoder in every three to four cars. The SoundCar also includes a 2-pin plug for optionally using the SoundTraxx CurrentKeeper[™] to maintain sounds and lights during momentary power losses due to finicky wheel pickups and not-so-perfect track.

BIG Sound Features!

The SoundCar decoder features new and accurate recordings, most of which can be customized to accommodate a variety of rolling stock. Furthermore, the decoder has automated sound sequences and auto-adjusting features for prototypical operation.

Intelligent Consisting[™] Consisting Made Easy

With the SoundCar, your switching sessions can be more realistic than ever! Our easy-to-use Intelligent Consisting[™] lets you add and remove cars from your train without tricky programming. When the mode is activated, you can simply wave a magnet over the cars to quickly cut them in or out of the consist. Just like a brakeman with a brake club, this action is synced with a sound effect of the car's hand brakes being tied or untied.

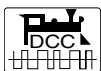

P.N.	Description	MSRP
829100	Tsunami SoundCar	\$42.50
829110	Tsunami SoundCar 3-pack	\$112.95

SoundCar Sound Effects!
